	Dru M. Parries	2836					
The MAILING DATE of this communication appe	ars on the cover sheet with the c	orrespondence add	ress				
THE REPLY FILED 24 August 2007 FAILS TO PLACE THIS AF	PPLICATION IN CONDITION FOR	ALLOWANCE.					
The reply was filed after a final rejection, but prior to or on the same day as filing a Notice of Appeal. To avoid abandonment of this application, applicant must timely file one of the following replies: (1) an amendment, affidavit, or other evidence, which places the application in condition for allowance; (2) a Notice of Appeal (with appeal fee) in compliance with 37 CFR 41.31; or (3) a Request for Continued Examination (RCE) in compliance with 37 CFR 1.114. The reply must be filed within one of the following time periods:							
a) $\square$ The period for reply expires $3$ months from the mailing date	of the final rejection.						
no event, however, will the statutory period for reply expire la	ne period for reply expires on: (1) the mailing date of this Advisory Action, or (2) the date set forth in the final rejection, whichever is later. In event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of the final rejection.  Caminer Note: If box 1 is checked, check either box (a) or (b). ONLY CHECK BOX (b) WHEN THE FIRST REPLY WAS FILED WITHIN						
TWO MONTHS OF THE FINAL REJECTION. See MPEP 7	06.07(f).						
Extensions of time may be obtained under 37 CFR 1.136(a). The date have been filed is the date for purposes of determining the period of extender 37 CFR 1.17(a) is calculated from: (1) the expiration date of the set forth in (b) above, if checked. Any reply received by the Office later may reduce any earned patent term adjustment. See 37 CFR 1.704(b)	tension and the corresponding amount shortened statutory period for reply orighthan three months after the mailing da	of the fee. Continuation of 11. does NOT place the application in condition for allowance because: To clarify, Spencer is the main reference and all modifications are done to this reference only. Also, all power and control signals are being sent from the controller (21) of Spencer to all of the components of his bicycle system. Admission teaches the idea of having composite signals, so Spencer is being modified with that idea so only one wire needs to be used for each component for power and control purposes. Also, Schwaller teaches supplying power to lights on bicycle equipment (the second electrical bicycle component) using a power stabilizing circuit, and Turner teaches a bicycle system using a backlight, so it would have been obvious to supply power to the backlight (the second electrical component) of Turner's invention using the power stabilizing circuit of the modified Spencer invention.

The composite signal being sent to the second electrical component is sent through Schwaller's power stabilizing circuit. The applicant's invention performs the same function as the modified Spencer invention, which is to supply the composite signal to the second bicycle component, via a power stabilizing circuit, but it is not controlled by the control signal (since it is destroyed via the stabilizing circuit). Also, for claim 39, Spencer teaches controlling the gear shift driving component via the composite signal which includes a control signal comprising a speed indicating signal.

For claim 48, Spencer's gear change actuator is equivalent to a CPU, which receives a composite signal and is controlled by the control signal component of the composite signal.
